**DRAINAGE REPORT**  
**“TIMBER CREST ESTATES”**  
**MEDWAY, MASSACHUSETTS**  
**September 7, 2017**

**Section 1.0: Introduction**

This report was prepared to accompany the Notice of Intent filing for the Timber Crest Estates project, consisting of a proposed subdivision of 147 house lots on 168 acres in the north section of Medway. Conservation Permitting Plans dated August 25, 2017 show the proposed project in detail, based upon a Comprehensive Permit per MGL Ch. 40B, issued by the Medway Zoning Board of Appeals. The drainage calculations herein document that stormwater runoff rates can be controlled using structural and low-impact development techniques, in compliance with the Massachusetts Department of Environmental Protection’s (DEP’s) Stormwater Management Regulations.

**Section 2.0: Existing Conditions**

Timber Crest Estates is located in the northerly area of Medway (refer to USGS Locus Map, Figure 1), containing 10 parcels of mostly woodlands, totaling approximately 170 acres. The site is bordered by residential areas along Winthrop Street and Ohlson Circle to the west, Fairway Lane to the north, Holliston Street to the east, and Fern Path and Howe Street to the south. The site is in the AR-I zoning district. Homes in the area are generally ranch or colonial-style homes situated on lots ranging in size from approximately ¼ to 1+ acres.

The property is currently mostly wooded, except for homesites at 102 Winthrop Street and 165 Holliston Street, with two utility easements running parallel to each other across the site. These easements are for underground natural gas mains (Algonquin Gas Transmission Company) and overhead, electric power transmission lines (Boston Edison). The site topography is relatively gently sloping, characterized by small hills and lower valleys where wetlands are located. Elevations are approximately 266 ft. at Winthrop Street, 280 ft. at Fairway Lane, 270 ft. at Holliston Street, and 274 ft. at Fern Path, with interior elevations ranging from approximately 265 ft. to 284 ft.

Soils in the upland areas of the site have been identified by the NRCS as varying types of sandy loam, with both Hydrologic Soil Group A and C. Refer to Appendix A for NRCS soils map information. Test pits were dug in locations where stormwater basins are proposed to document soil types and groundwater conditions (refer to the subdivision plans for test pit locations and soil logs). Soils in these test pits varied across the site, and included areas of sand, loamy sand and sandy loam. Groundwater was identified in some test pits either via mottling or standing water in the holes, and varied from approximately 3 ft. below ground surface or deeper in most locations.

The site location is not within any mapped environmentally sensitive areas based on review of MassGIS data, except there are three certified vernal pools in the northeast portion of the site and five other potential vernal pools that have all been mapped and

previously reviewed by the Medway Conservation Commission. The site is not within any regulatory floodways (i.e., no 100-yr. floodplains, see attached Flood Insurance Rate Map, Figure 2), state-designated Outstanding Resource Waters, Areas of Critical Environmental Concern (see Figure 3), Zone II of public wells or Zone A of public water supplies, or priority habitat of endangered or rare species as mapped by the MA Division of Fisheries and Wildlife (see Figure 4).

The wetlands on the site have been delineated with most of the bordering vegetated wetlands approved via three Orders of Resource Area Delineation issued by the Medway Conservation Commission; a fourth ORAD indicates that there is an intermittent stream present on the east portion of the site flowing northerly from the site to a culvert under Fairway Lane (note: the intermittent determination extends up to the south property line of the 165 Holliston Street property, and this streambed has also been documented to be dry to at least the north property line at 167 Holliston Street (land of Richards)).

The wetlands cover much of the interior portions of the site, and drain off-site to the northwest, northeast and southwest through three (3) different intermittent streams. Other discharge points are located (1) along the west boundary of the site towards the Winthrop Street drainage system, and (2) two isolated wetlands in the southwest corner of the site. These areas were delineated as a result of field investigations and review of the topography.

As such, the site was delineated into a number of sub-catchment areas, and runoff conditions were calculated at these 5 design discharge points, representing the flow to each of the wetland areas. Please refer to Appendix D-1 for Pre-Development Drainage Calcs and Appendix J for the Pre-Development Watershed Plan).

### **Section 3.0: Proposed Development**

Timber Crest Estates is a subdivision with two separate neighborhoods planned to preserve wetlands and upland areas between them as open space. The project consists of 147 homes, including 70 single family homes on the west portion of the site and 77 single-family homes on the east portion of the site. The subdivision roadway entrance for the west side is off of Winthrop Street directly opposite from Stephanie Road, ending in a cul de sac with an emergency access connecting to Ohlson Circle. The east side subdivision includes roadways that will connect Fairway Lane to Holliston Street; 2 lots are also proposed at the end of Fern Path. The subdivision will be serviced by town sewer and water mains. Underground cable utilities and natural gas are also to be provided.

Two permanent wetland crossings will be required to build the roadways on the east side, and a crossing over an intermittent stream is required for the emergency access road behind the home on 13 Ohlson Circle. Two temporary wetland alterations will be required to connect town water and sewer mains between the east and west side subdivisions. Wetland replication areas will be provided at a ratio of 1:1.

The site design and stormwater management system features sustainable development techniques to minimize the impact on the environment. It utilizes several low impact development techniques and best management practices (BMPs) as outlined in DEP's Stormwater Management Handbook, including the following:

- Narrower roadways, small lots and short driveways to reduce impervious area,
- Grassed parking areas at the two proposed bus shelters at Winthrop Street and Holliston Street.
- Roof drains are planned for most homes to recharge groundwater, and bioretention areas (or rain gardens) are planned in several locations to control runoff.
- Thirteen stormwater infiltration basins and three detention basins are proposed to control site runoff; some areas also utilize underground leaching chambers and a water quality swale.
- As was recommended by the Medway Department of Public Services in a comment letter during the Comprehensive Permit hearings with the Zoning Board, the site design and stormwater system for the 2 proposed homes at the end of Fern Path incorporate a T-turnaround for emergency vehicles (instead of a large paved cul de sac) and a shallow grassed infiltration swale, as low impact development features.
- All stormwater runoff from the other east and west side roads are directed to deep sump catch basins and piped to detention and infiltration basins which will store and infiltrate the runoff and slowly release it at a reduced flow rate from existing conditions. Some of the runoff will be discharged into the underlying soil (via roof drains and infiltration basins) thus providing recharge to the local aquifer.

These BMPS are sited at appropriate locations based on the soils and setbacks to wetlands, and were sized to accommodate the 100-year design storm without increasing any potential for downstream flooding. Refer to Appendix D-2 for the post-development hydrology calculations and Appendix J for the watershed map.

#### **Section 4.0: Drainage Design Methodology**

To determine changes in storm runoff for the proposed project, the HydroCAD Stormwater Modeling System software was used. This software closely approximates the USDA Soil Conservation Service (SCS) TR-20 methodology for calculating runoff. The calculations determined the change in the existing and post-development runoff rates to each drainage design point for each of the 2 year, 10 year, and 100 year storm events (and as requested by the Conservation Commission during the Comprehensive Permit hearings, the 25-year storm was also analyzed). All storm events analyzed comply with Technical Paper-40 (*Rainfall Frequency Atlas of the United States*) Rainfall Data. Infiltration rates used to size the recharge BMPs are based on the soil types found in the test pits and Rawl's rates as designated by DEP.

The stormwater design complies with the DEP Stormwater Management Regulations, incorporating a number of BMPs for water quality, recharge and runoff control (refer to Appendix B for the DEP Stormwater Checklist). The calculations herein document

compliance with rate and volume control, sizing of the detention and infiltration systems, as well as pretreatment, water quality and recharge volumes, and discharge velocities. Other appendices include operation and maintenance plans to ensure long-term viability of these drainage systems and to prevent pollution and degradation of the environment.

Please note that this project is subject to a NPDES General Construction Permit but a Storm Water Pollution Prevention Plan shall be submitted prior to construction to comply with Standard 8 of the DEP Stormwater Management Regulations provided in the appendices.

### **Section 5.0: Summary of Results**

In accordance with DEP requirements, the storm water design controls runoff for the 2 year, 10 year, and 100 year storm events (and also the 25-year storm) below existing conditions. There are five off-site design points that were analyzed with a summary of runoff rates and volumes as follows.

#### **Comparison of Pre- & Post-Development Runoff Rates**

##### **Design Point 1 - To Wetland and Low Area @ Winthrop Street**

	<b>Pre development</b>	<b>Post development</b>
<b><u>2 Year Storm (3.20")</u></b>	Rate/Volume	Rate/Volume
• To Design Point 1	0.32 cfs 0.077 af	0.03 cfs 0.015 af

**MAP INFORMATION**

The soil surveys that comprise your AOI were mapped at 1:25,000.

**Warning:** Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL: <http://websoilsurvey.nrcs.usda.gov>

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Norfolk and Suffolk Counties, Massachusetts

Survey Area Data: Version 11, Sep 28, 2015

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Apr 8, 2011—Apr 9, 2011

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

## Map Unit Legend

Norfolk and Suffolk Counties, Massachusetts (MA616)			
Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
31A	Walpole sandy loam, 0 to 3 percent slopes	7.9	1.5%

**Appendix B**  
DEP Checklist for Stormwater Report

# Checklist for Stormwater Report

## A. Introduction

**Important:** When filling out forms on the computer, use only the tab key to move your cursor - do not use the return key.

A Stormwater Report must be submitted with the Notice of Intent permit application to document compliance with the Stormwater Management Standards. The following checklist is NOT a substitute for the Stormwater Report (which should provide more substantive and detailed information) but is offered here as a tool to help the applicant organize their Stormwater Management documentation for their Report and for the reviewer to assess this information in a consistent format. As noted in the Checklist, the Stormwater Report must contain the engineering computations and supporting information set forth in Volume 3 of the [Massachusetts Stormwater Handbook](#). The Stormwater Report must be prepared and certified by a Registered Professional Engineer (RPE) licensed in the Commonwealth.

The Stormwater Report must include:

- The Stormwater Checklist completed and stamped by a Registered Professional Engineer (see page 2) that certifies that the Stormwater Report contains all required submittals.<sup>1</sup> This Checklist is to be used as the cover for the completed Stormwater Report.
- Applicant/Project Name
- Project Address
- Name of Firm and Registered Professional Engineer that prepared the Report
- Long-Term Pollution Prevention Plan required by Standards 4-6
- Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan required by Standard 8<sup>2</sup>
- Operation and Maintenance Plan required by Standard 9

In addition to all plans and supporting information, the Stormwater Report must include a brief narrative describing stormwater management practices, including environmentally sensitive site design and LID techniques, along with a diagram depicting runoff through the proposed BMP treatment train. Plans are required to show existing and proposed conditions, identify all wetland resource areas, NRCS soil types, critical areas, Land Uses with Higher Potential Pollutant Loads (LUHPPL), and any areas on the site where infiltration rate is greater than 2.4 inches per hour. The Plans shall identify the drainage areas for both existing and proposed conditions at a scale that enables verification of supporting calculations.

As noted in the Checklist, the Stormwater Management Report shall document compliance with each of the Stormwater Management Standards as provided in the Massachusetts Stormwater Handbook. The soils evaluation and calculations shall be done using the methodologies set forth in Volume 3 of the Massachusetts Stormwater Handbook.

To ensure that the Stormwater Report is complete, applicants are required to fill in the Stormwater Report Checklist by checking the box to indicate that the specified information has been included in the Stormwater Report. If any of the information specified in the checklist has not been submitted, the applicant must provide an explanation. The completed Stormwater Report Checklist and Certification must be submitted with the Stormwater Report.

<sup>1</sup> The Stormwater Report may also include the Illicit Discharge Compliance Statement required by Standard 10. If not included in the Stormwater Report, the Illicit Discharge Compliance Statement must be submitted prior to the discharge of stormwater runoff to the post-construction best management practices.

<sup>2</sup> For some complex projects, it may not be possible to include the Construction Period Erosion and Sedimentation Control Plan in the Stormwater Report. In that event, the issuing authority has the discretion to issue an Order of Conditions that approves the project and includes a condition requiring the proponent to submit the Construction Period Erosion and Sedimentation Control Plan before commencing any land disturbance activity on the site.

# Checklist for Stormwater Report

---

## B. Stormwater Checklist and Certification

The following checklist is intended to serve as a guide for applicants as to the elements that ordinarily need to be addressed in a complete Stormwater Report. The checklist is also intended to provide conservation commissions and other reviewing authorities with a summary of the components necessary for a comprehensive Stormwater Report that addresses the ten Stormwater Standards.

*Note:* Because stormwater requirements vary from project to project, it is possible that a complete Stormwater Report may not include information on some of the subjects specified in the Checklist. If it is determined that a specific item does not apply to the project under review, please note that the item is not applicable (N.A.) and provide the reasons for that determination.

A complete checklist must include the Certification set forth below signed by the Registered Professional Engineer who prepared the Stormwater Report.

---

### Registered Professional Engineer's Certification

I have reviewed the Stormwater Report, including the soil evaluation, computations, Long-term Pollution Prevention Plan, the Construction Period Erosion and Sedimentation Control Plan (if included), the Long-term Post-Construction Operation and Maintenance Plan, the Illicit Discharge Compliance Statement (if included) and the plans showing the stormwater management system, and have determined that they have been prepared in accordance with the requirements of the Stormwater Management Standards as further elaborated by the Massachusetts Stormwater Handbook. I have also determined that the information presented in the Stormwater Checklist is accurate and that the information presented in the Stormwater Report accurately reflects conditions at the site as of the date of this permit application.

### Checklist

**Project Type:** Is the application for new development, redevelopment, or a mix of new and redevelopment?

- New development
- Redevelopment
- Mix of New Development and Redevelopment

# Checklist for Stormwater Report

---

## Checklist (continued)

**LID Measures:** Stormwater Standards require LID measures to be considered. Document what environmentally sensitive design and LID Techniques were considered during the planning and design of the project:

- No disturbance to any Wetland Resource Areas
- Site Design Practices (e.g. clustered development, reduced frontage setbacks)
- Reduced Impervious Area (Redevelopment Only)
- Minimizing disturbance to existing trees and shrubs
- LID Site Design Credit Requested:
  - Credit 1
  - Credit 2
  - Credit 3
- Use of "country drainage" versus curb and gutter conveyance and pipe
- Bioretention Cells (includes Rain Gardens)
- Constructed Stormwater Wetlands (includes Gravel Wetlands designs)
- Treebox Filter
- Water Quality Swale
- Grass Channel
- Green Roof
- Other (describe): \_\_\_\_\_

### Standard 1: No New Untreated Discharges

- No new untreated discharges
- Outlets have been designed so there is no erosion or scour to wetlands and waters of the Commonwealth
- Supporting calculations specified in Volume 3 of the Massachusetts Stormwater Handbook included.

# Checklist for Stormwater Report

---

## Checklist (continued)

### Standard 2: Peak Rate Attenuation

- Standard 2 waiver requested because the project is located in land subject to coastal storm flowage and stormwater discharge is to a wetland subject to coastal flooding.
- Evaluation provided to determine whether off-site flooding increases during the 100-year 24-hour storm.
- Calculations provided to show that post-development peak discharge rates do not exceed pre-development rates for the 2-year and 10-year 24-hour storms. If evaluation shows that off-site flooding increases during the 100-year 24-hour storm, calculations are also provided to show that post-development peak discharge rates do not exceed pre-development rates for the 100-year 24-hour storm.

### Standard 3: Recharge

- Soil Analysis provided.
- Required Recharge Volume calculation provided.
- Required Recharge volume reduced through use of the LID site Design Credits.
- Sizing the infiltration, BMPs is based on the following method: Check the method used.
  - Static
  - Simple Dynamic
  - Dynamic Field<sup>1</sup>
- Runoff from all impervious areas at the site discharging to the infiltration BMP.
- Runoff from all impervious areas at the site is *not* discharging to the infiltration BMP and calculations are provided showing that the drainage area contributing runoff to the infiltration BMPs is sufficient to generate the required recharge volume.
- Recharge BMPs have been sized to infiltrate the Required Recharge Volume.
- Recharge BMPs have been sized to infiltrate the Required Recharge Volume *only* to the maximum extent practicable for the following reason:
  - Site is comprised solely of C and D soils and/or bedrock at the land surface
  - M.G.L. c. 21E sites pursuant to 310 CMR 40.0000
  - Solid Waste Landfill pursuant to 310 CMR 19.000
  - Project is otherwise subject to Stormwater Management Standards only to the maximum extent practicable.
- Calculations showing that the infiltration BMPs will drain in 72 hours are provided.
- Property includes a M.G.L. c. 21E site or a solid waste landfill and a mounding analysis is included.

<sup>1</sup> 80% TSS removal is required prior to discharge to infiltration BMP if Dynamic Field method is used.

# Checklist for Stormwater Report

---

## Checklist (continued)

### Standard 3: Recharge (continued)

- The infiltration BMP is used to attenuate peak flows during storms greater than or equal to the 10-year 24-hour storm and separation to seasonal high groundwater is less than 4 feet and a mounding analysis is provided.
- Documentation is provided showing that infiltration BMPs do not adversely impact nearby wetland resource areas.

### Standard 4: Water Quality

The Long-Term Pollution Prevention Plan typically includes the following:

- Good housekeeping practices;
  - Provisions for storing materials and waste products inside or under cover;
  - Vehicle washing controls;
  - Requirements for routine inspections and maintenance of stormwater BMPs;
  - Spill prevention and response plans;
  - Provisions for maintenance of lawns, gardens, and other landscaped areas;
  - Requirements for storage and use of fertilizers, herbicides, and pesticides;
  - Pet waste management provisions;
  - Provisions for operation and management of septic systems;
  - Provisions for solid waste management;
  - Snow disposal and plowing plans relative to Wetland Resource Areas;
  - Winter Road Salt and/or Sand Use and Storage restrictions;
  - Street sweeping schedules;
  - Provisions for prevention of illicit discharges to the stormwater management system;
  - Documentation that Stormwater BMPs are designed to provide for shutdown and containment in the event of a spill or discharges to or near critical areas or from LUHPPL;
  - Training for staff or personnel involved with implementing Long-Term Pollution Prevention Plan;
  - List of Emergency contacts for implementing Long-Term Pollution Prevention Plan.
- A Long-Term Pollution Prevention Plan is attached to Stormwater Report and is included as an attachment to the Wetlands Notice of Intent.
  - Treatment BMPs subject to the 44% TSS removal pretreatment requirement and the one inch rule for calculating the water quality volume are included, and discharge:
    - is within the Zone II or Interim Wellhead Protection Area
    - is near or to other critical areas
    - is within soils with a rapid infiltration rate (greater than 2.4 inches per hour)
    - involves runoff from land uses with higher potential pollutant loads.
  - The Required Water Quality Volume is reduced through use of the LID site Design Credits.
  - Calculations documenting that the treatment train meets the 80% TSS removal requirement and, if applicable, the 44% TSS removal pretreatment requirement, are provided.

# Checklist for Stormwater Report

---

## Checklist (continued)

### Standard 4: Water Quality (continued)

- The BMP is sized (and calculations provided) based on:
  - The ½" or 1" Water Quality Volume or
  - The equivalent flow rate associated with the Water Quality Volume and documentation is provided showing that the BMP treats the required water quality volume.
- The applicant proposes to use proprietary BMPs, and documentation supporting use of proprietary BMP and proposed TSS removal rate is provided. This documentation may be in the form of the proprietary BMP checklist found in Volume 2, Chapter 4 of the Massachusetts Stormwater Handbook and submitting copies of the TARP Report, STEP Report, and/or other third party studies verifying performance of the proprietary BMPs.
- A TMDL exists that indicates a need to reduce pollutants other than TSS and documentation showing that the BMPs selected are consistent with the TMDL is provided.

### Standard 5: Land Uses With Higher Potential Pollutant Loads (LUHPPLs)

- The NPDES Multi-Sector General Permit covers the land use and the Stormwater Pollution Prevention Plan (SWPPP) has been included with the Stormwater Report.
- The NPDES Multi-Sector General Permit covers the land use and the SWPPP will be submitted **prior to** the discharge of stormwater to the post-construction stormwater BMPs.
- The NPDES Multi-Sector General Permit does **not** cover the land use.
- LUHPPLs are located at the site and industry specific source control and pollution prevention measures have been proposed to reduce or eliminate the exposure of LUHPPLs to rain, snow, snow melt and runoff, and been included in the long term Pollution Prevention Plan.
- All exposure has been eliminated.
- All exposure has **not** been eliminated and all BMPs selected are on MassDEP LUHPPL list.
- The LUHPPL has the potential to generate runoff with moderate to higher concentrations of oil and grease (e.g. all parking lots with >1000 vehicle trips per day) and the treatment train includes an oil grit separator, a filtering bioretention area, a sand filter or equivalent.

### Standard 6: Critical Areas

- The discharge is near or to a critical area and the treatment train includes only BMPs that MassDEP has approved for stormwater discharges to or near that particular class of critical area.
- Critical areas and BMPs are identified in the Stormwater Report.

# Checklist for Stormwater Report

---

## Checklist (continued)

### **Standard 7: Redevelopments and Other Projects Subject to the Standards only to the maximum extent practicable**

- The project is subject to the Stormwater Management Standards only to the maximum Extent Practicable as a:
- Limited Project
  - Small Residential Projects: 5-9 single family houses or 5-9 units in a multi-family development provided there is no discharge that may potentially affect a critical area.
  - Small Residential Projects: 2-4 single family houses or 2-4 units in a multi-family development with a discharge to a critical area
  - Marina and/or boatyard provided the hull painting, service and maintenance areas are protected from exposure to rain, snow, snow melt and runoff
  - Bike Path and/or Foot Path
  - Redevelopment Project
  - Redevelopment portion of mix of new and redevelopment.
- Certain standards are not fully met (Standard No. 1, 8, 9, and 10 must always be fully met) and an explanation of why these standards are not met is contained in the Stormwater Report.
- The project involves redevelopment and a description of all measures that have been taken to improve existing conditions is provided in the Stormwater Report. The redevelopment checklist found in Volume 2 Chapter 3 of the Massachusetts Stormwater Handbook may be used to document that the proposed stormwater management system (a) complies with Standards 2, 3 and the pretreatment and structural BMP requirements of Standards 4-6 to the maximum extent practicable and (b) improves existing conditions.

### **Standard 8: Construction Period Pollution Prevention and Erosion and Sedimentation Control**

A Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan must include the following information:

- Narrative;
  - Construction Period Operation and Maintenance Plan;
  - Names of Persons or Entity Responsible for Plan Compliance;
  - Construction Period Pollution Prevention Measures;
  - Erosion and Sedimentation Control Plan Drawings;
  - Detail drawings and specifications for erosion control BMPs, including sizing calculations;
  - Vegetation Planning;
  - Site Development Plan;
  - Construction Sequencing Plan;
  - Sequencing of Erosion and Sedimentation Controls;
  - Operation and Maintenance of Erosion and Sedimentation Controls;
  - Inspection Schedule;
  - Maintenance Schedule;
  - Inspection and Maintenance Log Form.
- A Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan containing the information set forth above has been included in the Stormwater Report.

# Checklist for Stormwater Report

---

## Checklist (continued)

### Standard 8: Construction Period Pollution Prevention and Erosion and Sedimentation Control (continued)

- The project is highly complex and information is included in the Stormwater Report that explains why it is not possible to submit the Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan with the application. A Construction Period Pollution Prevention and Erosion and Sedimentation Control has **not** been included in the Stormwater Report but will be submitted **before** land disturbance begins.
- The project is **not** covered by a NPDES Construction General Permit.
- The project is covered by a NPDES Construction General Permit and a copy of the SWPPP is in the Stormwater Report.
- The project is covered by a NPDES Construction General Permit but no SWPPP been submitted. The SWPPP will be submitted BEFORE land disturbance begins.

### Standard 9: Operation and Maintenance Plan

- The Post Construction Operation and Maintenance Plan is included in the Stormwater Report and includes the following information:
  - Name of the stormwater management system owners;
  - Party responsible for operation and maintenance;
  - Schedule for implementation of routine and non-routine maintenance tasks;
  - Plan showing the location of all stormwater BMPs maintenance access areas;
  - Description and delineation of public safety features;
  - Estimated operation and maintenance budget; and
  - Operation and Maintenance Log Form.
- The responsible party is **not** the owner of the parcel where the BMP is located and the Stormwater Report includes the following submissions:
  - A copy of the legal instrument (deed, homeowner's association, utility trust or other legal entity) that establishes the terms of and legal responsibility for the operation and maintenance of the project site stormwater BMPs;
  - A plan and easement deed that allows site access for the legal entity to operate and maintain BMP functions.

### Standard 10: Prohibition of Illicit Discharges

- The Long-Term Pollution Prevention Plan includes measures to prevent illicit discharges;
- An Illicit Discharge Compliance Statement is attached;
- NO Illicit Discharge Compliance Statement is attached but will be submitted **prior to** the discharge of any stormwater to post-construction BMPs.

**Appendix C**  
Maximum Discharge Velocities (Standard #1)

JOB #: OE-2765  
JOB NAME: Timber Crest Estates  
TOWN: Medway

CALC BY: CJV      CHECK BY: J.A.P      DATE: 9/7/17

#### STANDARD 1: NO UNTREATED DISCHARGE OR EROSION TO WETLANDS

##### No new untreated discharge:

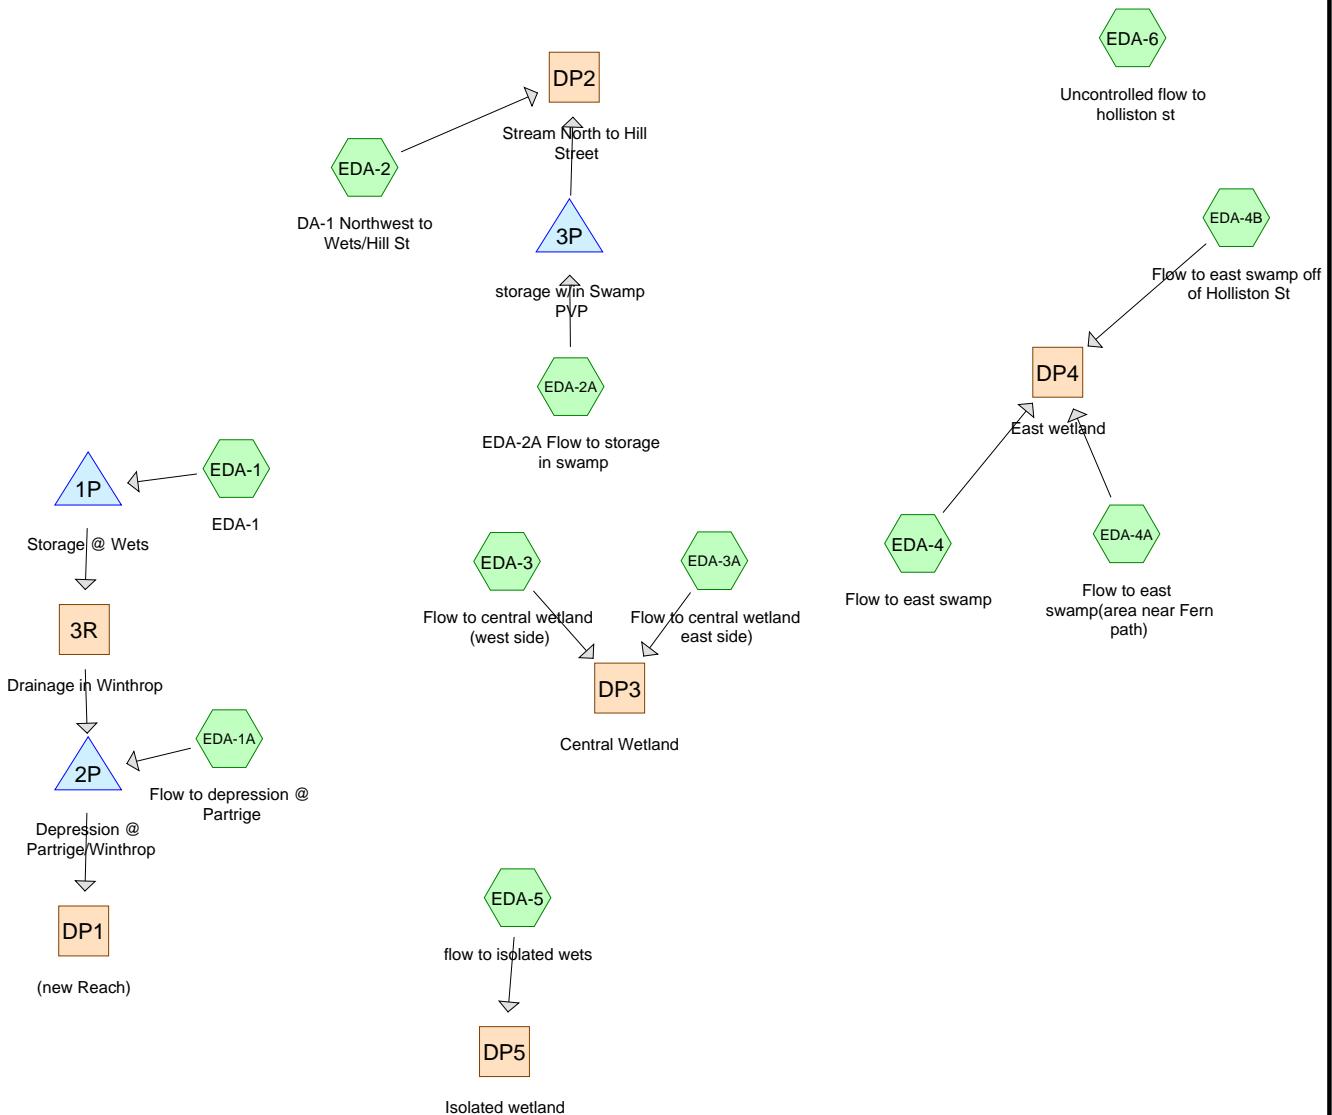

Computations required to demonstrate compliance with Standards 4 through 6 may be used to demonstrate that all new discharges are adequately treated.

##### Maximum Discharge Velocity & Ability of Ground Surface to Resist Erosion:

Discharge Outlet	Max. Discharge Velocity (ft/s)*	Receiving Groundcover	Receiving Slope	Permissible Velocity (ft/s)**	Suitability
4" Orifice @ Det Basin 1	5.35	Lawn	1%	5	Requires Level Spreader
4" Orifice @ Infil. Basin #2	5.14	Lawn	2%	5	Requires Level Spreader
2" Orifice @ Det. Basin #6	4.13	Lawn	2%	5	O.K.
(2) 4" Orifice @ Infil. Basin #9	3.03	Lawn	5%	5	O.K.
6" Orifice @ Infil. Basin #8	5.07	Lawn	4%	5	Requires Level Spreader
4" Orifice @ Ext. Dry Det. Basin #8A	7.52	Lawn	1%	5	Requires Level Spreader
2" Orifice @ Ext. Dry Det. Basin #10	8.27	Lawn	2%	5	Requires Level Spreader
8" culverts @ LC-4 bed	3.05	Lawn	2%	5	O.K.
2" Orifice @ Ext. Dry Det. Basin #11	9.47	Lawn	2%	5	Requires Level Spreader
2" Orifice @ Infil. Basin #13	4.25	Lawn	2%	5	O.K.
2" Orifice @ Ext. Dry Det. Basin #14	9.47	Lawn	2%	5	Requires Level Spreader
Broad-crested weir @ infil. Basin #16	1.17	Lawn	2%	5	O.K.

\* Maximum discharge velocity obtained from post-development hydrology calculation (see Appendix C-2)

TOWN: Medway

CALC BY: CJV    DATE: 9/7/17  
CHECK BY: JAP    DATE: 9/7/17

### STANDARD 3: GROUNDWATER RECHARGE CALCULATIONS

#### Required Recharge Volume

Rv = F x impervious area (including green roofs & porous pavement)  
where F = Target Depth Factor

\*Total Impervious Area = 478,373 S.F. = 10.98 ACRES

\*Total Impervious area does not include roof areas going to roof drains

	HSG A	HSG B	HSG C	HSG D
Impervious Area (sf)	353,677	0	117,725	6,971
Target Depth Factor (in.)	0.6	0.35	0.25	0.1
Annual Recharge Volume (cf)	17,684	0	2,453	58

Total required volume to recharge = 20,195 c.f.

#### CAPTURE AREA ADJUSTMENT:

Total Site Impervious Area	=	10.98	ACRES
Total Impervious Area Directed to Infiltration BMPs	=	10.25	ACRES
Adjustment Ratio	=	10.98	/ 10.25
Adjusted Required Recharge Volume	=	20,195	x 1.07
	=	21,637	c.f.
	=	21,637	/ 43,560
	=	0.497	a.f.

#### SIMPLE DYNAMIC METHOD:

Recharge Provided through exfiltration in Infiltration Basins 1-9 and 12-16  
1.18" rainfall event required to produce adjusted required recharge volume  
Storm start time of 11 hours and end time of 13 hours (see attached hydrograph and drain summary)  
Required Storage Volume, assuming exfiltration rate of 1.02 in/hr = 18,500 c.f.

Volume provided in Infiltration Basin 1 (below lowest outlet at 265.5):  
Cumulative Vol. at 265.50 = 3,022 c.f.

Volume provided in Infiltration Basin 2 (below lowest outlet at 276.0):  
Cumulative Vol. at 276.0 = 4,453 c.f.

Volume provided in Infiltration Basin 3 (below lowest outlet at 279.0):  
Cumulative Vol. at 279.0 = 12,500 c.f.

Volume provided in Infiltration Basin 4 (below lowest outlet at 274.00):  
Cumulative Vol. at 274.00 = 7,914 c.f.

Volume provided in Infiltration Basin 5 (below lowest outlet at 273.00):  
Cumulative Vol. at 273.00 = 9,101 c.f.

Volume provided in Infiltration Basin 6 (below lowest outlet at 269.00):  
Cumulative Vol. at 269.00 = 963 c.f.

Volume provided in Infiltration Basin 7 (below lowest outlet at 263.3):  
Cumulative Vol. at 263.30 = 6,839 c.f.

Volume provided in Infiltration Basin 8 (below lowest outlet at 265.75):  
Cumulative Vol. at 265.75 = 1,428 c.f.

Volume provided in Infiltration Basin 9 (below lowest outlet at 274.00):  
Cumulative Vol. at 274.00 = 3,409 c.f.

Volume provided in Infiltration Basin 12 (below lowest outlet at 271.00):  
Cumulative Vol. at 271.00 = 7,304 c.f.

Volume provided in Infiltration Basin 13 (below lowest outlet at 273.50):  
Cumulative Vol. at 273.50 = 2,702 c.f.

Volume provided in Infiltration Basin 14 (below lowest outlet at 275.00):  
Cumulative Vol. at 275.00 = 8,045 c.f.

Volume provided in Infiltration Basin 15 (below lowest outlet at 266.00):  
Cumulative Vol. at 266.00 = 2,171 c.f.

Volume provided in Infiltration Basin 16 (below lowest outlet at 272.25):  
Cumulative Vol. at 272.25 = 1,122 c.f.

**DRAWDOWN WITHIN 72 HOURS**

DRAWDOWN TIME =  $(Rv)(1/IR)(12 \text{ inches}/1 \text{ foot})(1/BA)$

WHERE,

Rv = RECHARGE VOLUME IN CUBIC FEET

IR = DESIGN INFILTRATION RATE IN INCHES PER HOUR

BA = BOTTOM AREA IN SQUARE FEET

**INFILTRATION BASIN 1**

$$\text{DRAWDOWN TIME} = 3,022 \times \frac{1}{2.41} \times \frac{12}{1} \times \frac{1}{3,448} = \boxed{4.36} \text{ Hours}$$

**INFILTRATION BASIN 2**

$$\text{DRAWDOWN TIME} = 4,453 \times \frac{1}{8.27} \times \frac{12}{1} \times \frac{1}{1,260} = \boxed{5.13} \text{ Hours}$$

**INFILTRATION BASIN 3**

$$\text{DRAWDOWN TIME} = 12,500 \times \frac{1}{2.41} \times \frac{12}{1} \times \frac{1}{6,760} = \boxed{9.21} \text{ Hours}$$

**INFILTRATION BASIN 4**

$$\text{DRAWDOWN TIME} = 7,914 \times \frac{1}{2.41} \times \frac{12}{1} \times \frac{1}{4,280} = \boxed{9.21} \text{ Hours}$$

**INFILTRATION BASIN 5**

$$\text{DRAWDOWN TIME} = 9,101 \times \frac{1}{2.41} \times \frac{12}{1} \times \frac{1}{4,974} = \boxed{9.11} \text{ Hours}$$

**INFILTRATION BASIN 6**

$$\text{DRAWDOWN TIME} = 963 \times \frac{1}{2.41} \times \frac{12}{1} \times \frac{1}{2,694} = \boxed{1.78} \text{ Hours}$$

**INFILTRATION BASIN 7**

$$\text{DRAWDOWN TIME} = 6,839 \times \frac{1}{8.27} \times \frac{12}{1} \times \frac{1}{3,170} = \boxed{10.74} \text{ Hours}$$

**INFILTRATION BASIN 8**

$$\text{DRAWDOWN TIME} = 1,428 \times \frac{1}{8.27} \times \frac{12}{1} \times \frac{1}{818} = \boxed{2.53} \text{ Hours}$$

**INFILTRATION BASIN 9**

$$\text{DRAWDOWN TIME} = 3,409 \times \frac{1}{1.02} \times \frac{12}{1} \times \frac{1}{2,170} = \boxed{18.48} \text{ Hours}$$

**INFILTRATION BASIN 12**

$$\text{DRAWDOWN TIME} = 7,304 \times \frac{1}{8.27} \times \frac{12}{1} \times \frac{1}{2,158} = \boxed{4.91} \text{ Hours}$$

**INFILTRATION BASIN 13**

$$\text{DRAWDOWN TIME} = 2,702 \times \frac{1}{2.41} \times \frac{12}{1} \times \frac{1}{550} = \boxed{24.46} \text{ Hours}$$

**INFILTRATION BASIN 14**

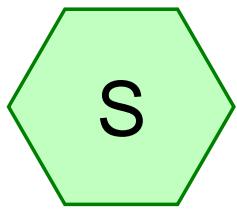

$$\text{DRAWDOWN TIME} = 8,045 \times \frac{1}{2.41} \times \frac{12}{1} \times \frac{1}{4,528} = \boxed{8.85} \text{ Hours}$$

**INFILTRATION BASIN 15**

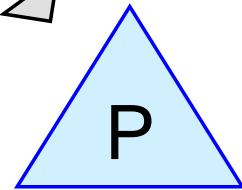

$$\text{DRAWDOWN TIME} = 2,171 \times \frac{1}{2.41} \times \frac{12}{1} \times \frac{1}{530} = \boxed{20.40} \text{ Hours}$$

**INFILTRATION BASIN 16**

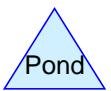

$$\text{DRAWDOWN TIME} = 1,122 \times \frac{1}{2.41} \times \frac{12}{1} \times \frac{1}{555} = \boxed{10.07} \text{ Hours}$$

#### STANDARD 4: WATER QUALITY

##### WATER QUALITY VOLUME:

$V(WQ) = D(WQ) \times (12 \text{ IN. / FT}) \times A(\text{IMP})$

WHERE,

$V(WQ)$  = REQUIRED WATER QUALITY TREATMENT VOLUME IN CUBIC FEET

$D(WQ)$  = WATER QUALITY DEPTH (0.5 INCH OR 1 INCH)

$A(\text{IMP})$  = IMPERVIOUS AREA IN S.F.

##### WATER QUALITY VOLUME AT BASIN 1

CONTRIBUTING IMPERVIOUS AREA = **37,462** S.F.  
 $V(WQ) = 0.5 \text{ IN.} \times 37,462 \text{ S.F.} = 1,561 \text{ C.F.}$

VOLUME PROVIDED FROM DEEP SUMP HOODED CATCH BASINS

( $3.14 \times (2\text{ft})^2 \times 4\text{ft}$ ) X **5** CATCH BASINS = **251** C.F.

VOLUME PROVIDED FROM SEDIMENT FOREBAY

(See Sediment Forebay Calculations) = **337** C.F.

VOLUME PROVIDED AT POND 1 (BELOW LOWEST OUTLET)

(See Groundwater Recharge Calculations)

TOTAL = **3,610** C.F.

##### WATER QUALITY VOLUME AT BASIN 2

CONTRIBUTING IMPERVIOUS AREA = **33,130** S.F.  
 $V(WQ) = 0.5 \text{ IN.} \times 33,130 \text{ S.F.} = 1,380 \text{ C.F.}$

VOLUME PROVIDED FROM DEEP SUMP HOODED CATCH BASINS

( $3.14 \times (2\text{ft})^2 \times 4\text{ft}$ ) X **3** CATCH BASINS = **151** C.F.

VOLUME PROVIDED FROM SEDIMENT FOREBAY

(See Sediment Forebay Calculations) = **285** C.F.

VOLUME PROVIDED AT POND 2 (BELOW LOWEST OUTLET)

(See Groundwater Recharge Calculations)

TOTAL = **4,889** C.F.

##### WATER QUALITY VOLUME AT BASIN 3

CONTRIBUTING IMPERVIOUS AREA = **45,227** S.F.  
 $V(WQ) = 1 \text{ IN.} \times 45,227 \text{ S.F.} = 3,769 \text{ C.F.}$

VOLUME PROVIDED FROM DEEP SUMP HOODED CATCH BASINS

( $3.14 \times (2\text{ft})^2 \times 4\text{ft}$ ) X **4** CATCH BASINS = **201** C.F.

VOLUME PROVIDED FROM SEDIMENT FOREBAY

(See Sediment Forebay Calculations) = **378** C.F.

VOLUME PROVIDED AT POND 3 (BELOW LOWEST OUTLET)

**Appendix G**  
Long-Term Pollution Prevention Plan (Standards #4-6)

This Long Term Pollution Prevention Plan serves to outline practices in order to prevent pollution of the wetland resource areas and surrounding environment.

It is anticipated that the town will eventually accept the roadways and be responsible for the Operation and Maintenance of the drainage systems upon completion. Prior to this event the developer and/or a Homeowners Association will be responsible. Please refer to the Conservation Permitting Plans (Sheet 2) for the Post-Development Operation and Maintenance schedule for the drainage system. This O & M Plan shall be adhered to by the Developer and his successors (see also Appendix H).

Snow disposal shall be carried out by the developer/owner or a contractor assigned this responsibility. The contractor should follow DEP guideline #BRPG 01-01 for all snow removal requirements. Snow shall be plowed and furrowed along the shoulders of the roadway, and shall not be placed in the drainage basins or any wetlands. Snow combined with sand and debris may block a storm drainage system, causing localized flooding. A high volume of sand, sediment, and litter released from melting snow also may be quickly transported through the system into surface water.

In the event of a reportable quantity of oil, gasoline or other hazardous waste spill on-site, the Fire Department and DEP shall be notified immediately. Proper cleanup and disposal of hazardous wastes must follow all applicable local and state regulations and must be carried out by a qualified contractor.

The maintenance of all lawn and yard areas shall be performed by the individual homeowners. Minimal use of cleaning products and fertilizers is advised. Where homes are required to have roof drains, homeowners shall be responsible for maintenance also (refer to plans for more information on roof drains)

## **Appendix H**

Long-Term Operation & Maintenance Plan and Log Form (Standard #9)

## **TIMBER CREST SUBDIVISION – Medway, MA**

### **Operation & Maintenance Plan & Log Form**

#### A) Construction Operation and Maintenance Schedule

The Operation and Maintenance (O&M) Schedule during the construction period is the responsibility of the Developer/Contractor. The project is subject to a NPDES Construction General Permit which shall be filed with EPA prior to commencing construction, and a Stormwater Pollution Prevention Plan (SWPPP) shall be prepared at that time that will cover detailed erosion controls and good housekeeping practices to prevent sedimentation and erosion into wetlands and other pollution prevention controls. The outline below is a general format that should be followed by the contractor/developer as closely as possible to ensure the proper construction and function of the drainage facilities. Refer to the project Phasing Plan for other construction requirements.

1. Erosion control silt fence to be placed at locations shown on the plans according to the Phasing Plan to minimize disturbance of the site; use double silt fence at all work limits within 50 ft. of any wetlands.
2. Minimum clearing should occur during the construction process. The limit of clearing is shown on the Grading & Drainage Plans and should be adhered to as closely as possible, with the only tree removal in areas necessary for each phase. It shall be the contractor's responsibility to determine the level of safety regarding standing trees.
3. In conjunction with subdivision roadway construction, the drainage system shall be constructed and side slopes stabilized as soon as possible (i.e. loam and seed, hydroseed, etc.). Once upslope areas are stabilized or it is determined that no sediment is entering the drainage system, they shall be cleaned free of fine sediment.
4. Silt fence, erosion control blankets, mulch and other erosion control materials should be placed at the bottom slopes of infiltration basin until they are stabilized, to prevent washouts and clogging of the bottom soils. Upon stabilization of upslope areas, the silt fence/erosion controls and accumulated sediment shall be removed and disposed offsite.
5. Drainage systems, road shoulders, and silt fence shall be inspected weekly and after heavy rains (over 1" rainfall) during construction. If there is sediment buildup observed in any drainage basin or along silt fence work limits, it shall be cleaned immediately.

## **TIMBER CREST SUBDIVISION – Medway, MA**

### **B) Post-Construction Operation and Maintenance Schedule**

It is anticipated that the town will eventually accept the roadways and be responsible for the Operation and Maintenance of the drainage systems upon completion. Prior to this event the developer and/or a Homeowners Association will be responsible. Please refer to the Conservation Permitting Plans (Sheet 2) for the Post-Development Operation and Maintenance schedule for the drainage system. This O & M Plan shall be adhered to by the Developer and his successors (see also Appendix H).

Snow disposal shall be carried out by the developer or town/contractor assigned this responsibility. The contractor should follow DEP guideline #BRPG 01-01 for all snow removal requirements. Snow shall be plowed and furrowed along the shoulders of all roadways, including the emergency access road between Road E cul de sac and Ohlson Circle, to ensure accessibility for emergency vehicle use. Snow shall not be placed in the drainage basins or any wetlands. Snow combined with sand and debris may block a storm drainage system, causing localized flooding. A high volume of sand, sediment, and litter released from melting snow also may be quickly transported through the system into surface water.

### **Drainage Swales, Culverts and Roadways**

Refer to the Inspection & Maintenance Form for required inspection and maintenance tasks to keep the drainage system in good working order, according to DEP Stormwater Management Regulations.

1. Street sweeping should be done each spring after final snow melt.
2. Catch basins and water quality tanks should be cleaned of sediment annually.
3. Detention and Infiltration Basins should be inspected annually to check for signs of erosion or prolonged standing water. Basins should be mowed twice per growing season to prevent woody vegetation growth. Sediment forebays should be inspected twice per year, and cleaned of sediment as necessary. Outlets and riprap shall be inspected on an annual basis and maintained in good working condition.
4. Underground leaching beds shall be inspected annually by viewing inspection ports to check for standing water or sediment.
5. Rain gardens and roof drains on individual lots shall be maintained by homeowners. For rain gardens, annual cleaning of dead vegetation and restoration of mulch are required.
6. Rain gardens on Open Space Parcels A and H shall be the responsibility of the town or a Homeowners Association. Annual cleaning of dead vegetation and restoration of mulch are required. Rain garden on Open Space A has a catch basin outlet that may require period cleaning.
