

SAVE THE RAIN DIVERTER – SMALL

Details and Installation

- Diverter attaches easily to gutter downspout
- Draw a line on the downspout approximately 9 inches above the top of the rain barrel
- Move the barrel away
- Use a hacksaw and cut the downspout at the line or marking

Note:

if a downspout bracket is below your cut, remove the bracket and place it above the cut

- Attach diverter and set angle
- The diverter is designed so that you can crimp the sides of the downspouts to fit the diverter
- Tools needed: a hacksaw & measuring tape
